ALL DRINKING WATER MAY CONTAIN CONTAMINANTS

When drinking water meets federal standards there may not be any health based benefits to purchasing bottled water or point of use devices. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline 1-800-426-4791

SECONDARY CONSTITUENTS

Many constituents (such as calcium, sodium, or iron) which are often found in drinking water, can cause taste, color, and odor problems. The taste and odor constituents are called secondary constituents and are regulated by the State of Texas, not the EPA. These constituents are not necessarily causes for health concern. Therefore, secondaries are not required to be reported in this document, but they may greatly affect the appearance and taste of your water. For more information on secondary constituents contact H₂O Consulting at **281-861-7265**.

DEFINITIONS AND UNIT DESCRIPTIONS

- AL Action Level - The concentration level of a contaminant which, if exceeded, requires a water system to treat water or follow other requirements
- MCL Maximum Contaminant Level The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
- MCLG Maximum Contaminant Level Goal The level of a contaminant in drinking water below which there is no known or expected health risk. MCLGs allow for a margin of safety.
- MFL Million Fibers per Liter (a measure of asbestos)
- MRDL Maximum Residual Disinfection Level The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- MRDLG Maximum Residual Disinfection Level Goal The level of a drinking water disinfectant below which there is no known or expected health risk. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- Not applicable NA
- NTU Nephelometric turbidity units (a measure of turbidity)
- pCi/L Picocuries per liter (a measure of radioactivity)
- ppb Parts per billion, or micrograms per liter (μ g/L), or one ounce in 7.350,000 aallons of water.
- Parts per million, or milligrams per liter (mg/L), or one ounce in 7.350 gallons of water.
- Parts per quadrillion, or picograms per liter (pg/L)
- Parts per trillion, or nanograms per liter (ng/L) ppt

SPECIAL NOTICE For the Elderly, Infants, Cancer Patients, People with HIV/AIDS or **Other Immune Problems**

You may be more vulnerable than the general population to certain microbial contaminants such as Cryptosporidium, in drinking water. Infants, some elderly, or immuno-compromised persons such as those undergoing chemotherapy for cancer; persons who have undergone organ transplants: those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care provider. Additional guidelines on appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline: 1-800-426-4791.

QUESTIONS?

If you would like to talk to a District representative about your Water Quality Report, please call 281-861-7265. For more information from the U.S. Environmental Protection Agency, you may call the EPA's Safe Drinking Water Hotline at 1-800-426-4791.

En español: Este reporte incluye información importante sobre el agua para tomar. Para asistencia en español, favor de llamar al telefono 281-861-7265.

PUBLIC PARTICIPATION **OPPORTUNITIES**

The Board of Directors of Harris County MUD No. 127 meet at 12:00 PM on the second Thursday of each month at 6750 West Loop South, Suite 865, Bellaire, Harris County, Texas. You may mail comments to:

Harris County MUD No.127 Attn.: Board of Directors 5870 Highway 6 North, Suite 215 Houston, TX 77084

Or call **281-861-7265**

ABOUT OUR DRINKING WATER

The Texas Commission on Environmental Quality (TCEQ) has assessed our system and determined that our water is safe to drink. This analysis is based on the data in the attached tables. If your water meets federal standards there may not be any health benefits to purchasing bottled water or point-of-use devices.

WHERE DO WE GET OUR WATER?

Our drinking water is obtained form multiple sources, and blended at our storage tanks. Our ground water comes from the Harris County MUD 127 and Harris County MUD 239 ground water wells, which come from the Chicot aquifers. Our surface water is purchased from WHCWRA. Texas Commission on Environmental Quality completed an assessment of your source water and results indicate that some of our sources are susceptible to certain contaminants. The sampling requirements for your water system are based on this susceptibility and previous sample data. Any detections of these contaminants will be found in this Consumer Confidence Report. If we receive or purchase water from another system, their susceptibility is not included in this report. For more information on source water assessments and protection efforts visit Texas Drinking Water Watch http://dww.tceq.state.tx.us/DWW/.

ADDITIONAL HEALTH INFORMATION FOR LEAD

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

WATER SOURCES

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water prior to treatment include:

- plants, septic systems, agricultural livestock operations, and wildlife.
- mining, and farming.
- stormwater runoff, and residential uses.
- urban stormwater runoff, and septic systems.
- Radioactive contaminants, which can be production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (EPA) prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Federal Food and Drug Administration Agency regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

• Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment

• Inorganic contaminants, such as salts and metals which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production,

• Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban

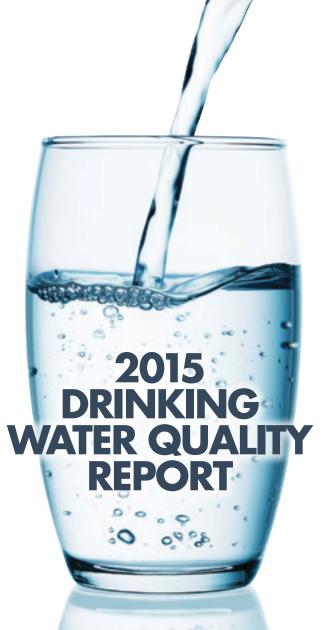

• Organic chemical contaminants, including synthetic and volatile organic chemicals which are by-products of industrial processes and petroleum production, and can also come from gas stations,

naturally-occurring or be the result of oil and gas

HARRIS COUNTY MUNICIPAL UTILITY DISTRICT NO.127

ABOUT THE TABLES

The attached table contains all of the contaminants which have been found in your drinking water. The U.S. EPA requires water systems to test for up to 97 contaminants. All contaminants detected in your water are below state and federal allowed levels. The State of Texas allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Our water system purchases water from WHCRWA and is also a shared water system with Harris County MUD No. 239. Both of their water quality information is provided below.

HARRIS COUNTY MUD 127 – Inorganic Contaminants	HARRIS COUNTY MUD 239 – Inorganic Contaminants	WHCRWA – Radioactive Contaminants (Regulated at the Water Plant)
Year Contaminant Highest Level Level McL MCLG Unit of Measure Violation Source of Contaminant	Year Contaminant Highest Level Maximum Level MCL MCLG Unit of Violation Source of Contaminant	Year Contaminant Average Minimum Maximum Level MCL MCLG Unit of Measure Violation Source of Contaminant
